

March 2022 Quarterly Activity Report

- **Strong cash position of \$5.1M** at the end of the quarter allows for continued aggressive exploration activities
- **Murchison Gold Project** exploration delivered broad zones of shallow gold mineralisation outside existing mineral resources, results include:

Turnberry:

- **16m @ 6.67g/t Au** from 20m including **4m @ 24.10g/t Au** (21TBRC014)
- **29m @ 1.95g/t Au** from 32m including **3m @ 5.23g/t Au & 6m @ 4.06g/t Au** (21TBRC015)
- **21m @ 2.28g/t Au** from 100m including **4m @ 5.14g/t Au** (21TBRC013)

St Anne's:

- **24m @ 4.81g/t Au** from 68m including **4m @ 20.30g/t Au** (21SARC002)
- **36m @ 1.02g/t Au** from 24m including **8m @ 2.35g/t Au** (21SARC004)
- **20m @ 1.01g/t Au** from 40m (21SARC001)
- **8m @ 2.66g/t Au** from 104m including **1m @ 16.45g/t Au** (21SARC008)

- **Circle Valley Project gold exploration** advanced materially with shallow gold mineralisation intersected in the very first RC hole:
 - **20m @ 4.66g/t Au** within **36m @ 2.69g/t Au** from 12m (22CVRC001)
- **Circle Valley Project rare earth exploration** initiated with the identification of regolith clay hosted REE mineralisation, aircore drilling returned thick zones of mineralisation over a 7km x 5km area, including:
 - **1m @ 1,521ppm TREO** within **4m @ 993ppm TREO** from 20m (CVAC035)
 - **4m @ 1,269ppm TREO** within **12m @ 715ppm TREO** from 8m (22CVAC030)
 - **4m @ 1,177ppm TREO** within **5m @ 1,040ppm TREO** from 36m (CVAC023)
 - **16m @ 1,098ppm TREO** within **36m @ 672ppm TREO** from 12m (22CVAC031)
 - **4m @ 1,040ppm TREO** within **10m @ 665ppm TREO** from 36m (CVAC036)
 - **12m @ 1,003ppm TREO** within **36m @ 672ppm TREO** from 28m (CVAC017)
 - **16m @ 803ppm TREO** within **23m @ 582ppm TREO** from 12m (22CVAC024)
- **Cascade Rare Earth Project** secured under 2,068km² of Exploration Licenses/Applications with significant areas of elevated rare earth elements identified in drilling

Meeka Gold Limited (ASX:MEK) ("**Meeka**" or "**the Company**") is pleased to provide a summary of activities completed during the March 2022 quarter.

The Company was actively exploring for gold during the quarter with drilling ongoing at both the Murchison Gold Project and the Circle Valley Project, in the Albany-Fraser. Assay results returned from the Murchison Gold Project show

significant mineralisation was interested in multiple locations outside of the mineral resource with strong potential to grow the resource.

Gold exploration activities at Circle Valley advanced materially with the first RC hole, drilled in early January, intersecting 36m @ 2.69g/t Au. In addition to the RC drilling, a regional aircore program was completed and successfully identified two large new gold anomalies coincident with a magnetic feature that extends to the Fenceline prospect 5.5km to the east. The Company also flew a high-resolution magnetic survey over the entire Circle Valley tenure during the quarter. The survey was flown at a 50m line spacing and will provide improved resolution to assist in exploration targeting over the coming months.

With respect to the emerging rare earth exploration opportunity, drilling completed for gold at Circle Valley during June 2021 was re-assayed for rare earth elements (REE) with significant intervals of regolith clay hosted mineralisation evident in the results. Subsequently aircore drilling completed during the quarter was also analysed at the laboratory for REE with further significant results returned. The REE mineralisation is hosted within the saprolite clay layer, which blankets the tenement in varying thickness from 2m to over 50m. At the end of the quarter this saprolite clay layer had been intersected by drilling over an approximate area of 10km by 5km.

During the quarter the Company secured the Cascade Rare Earth Project covering 2,068km² of the Albany-Fraser Mobile Belt, 45km to the southwest of Circle Valley. The Project is highly prospective for regolith hosted REE mineralisation as well as gold.

Financially the Company finished the quarter with a strong cash position of \$5.1M, which will allow exploration activities to continue aggressively in both the Murchison, targeting gold, and in the Albany-Fraser targeting gold and rare earth mineralisation.

Commenting on work done during the quarter, CEO Tim Davidson said:

"Great progress was made by the exploration team during the quarter with numerous excellent intersections of shallow gold mineralisation returned from drilling in the Murchison, and an outstanding result from the very first RC drill hole at Circle Valley, which intersected 36m at 2.7g/t gold below a large gold in soil anomaly.

We also had an interesting development when it was identified that the thick saprolite clays that blanket the Circle Valley tenure are enriched with rare earth elements. With 13,900m of aircore drilling now currently being reanalysed for REE, the Company looks forward to providing additional updates over the coming months as these REE results are received from the laboratory.

With the multiple work programs underway, both in the Murchison (gold exploration) and in the Albany-Fraser (gold and REE exploration) we look forward to an exciting final quarter of FY22."

EXPLORATION – WESTERN AUSTRALIA

Murchison Gold Project

Exploration diamond drilling in the Murchison targeted depth extensions below the planned open pit at Turnberry. While no assay results from the deeper Turnberry diamond drilling were received during the quarter, the Company did receive assay results from the RC pre-collars that was completed in advance of the diamond drilling (see [ASX announcement dated 15th February](#)). The RC pre-collar drilling intersected broad zones of gold mineralisation at shallow depths, between 17m and 85m vertically below surface with results including:

- **16m @ 6.67g/t Au** from 20m including **4m @ 24.10g/t Au** (21TBRC014)
- **21m @ 2.28g/t Au** from 100m including **4m @ 5.14g/t Au** (21TBRC013)
- **29m @ 1.95g/t Au** from 32m including **3m @ 5.23g/t Au** and **6m @ 4.06g/t Au** (21TBRC015)
- **11m @ 1.25g/t Au** from 66m (21TBRC014)
- **8m @ 0.46g/t Au** from 82m (21TBRC014)
- **4m @ 1.39g/t Au** from 100m (21TBRC014)
- **4m @ 0.64g/t Au** from 150m (21TBRC013)

Figure 1: Turnberry Central drilling plan.

These drill holes appear to have intersected continuity of mineralisation beyond the existing Mineral Resource and in the case of hole 21TBRC014, a new lode striking out to the northwest. They present an exciting resource expansion opportunity for the Company.

The Company also received assay results for drilling at St Anne's that was designed to follow up on shallow high-grade mineralisation intersected during the Phase 1 drilling campaign (see [ASX announcement dated 31st January](#)). New results received during the quarter include:

- **24m @ 4.81g/t Au** from 68m including **4m @ 20.30g/t Au** (21SARC002)
- **36m @ 1.02g/t Au** from 24m including **8m @ 2.35g/t Au** (21SARC004)
- **8m @ 2.66g/t Au** from 104m including **1m @ 16.45g/t Au** (21SARC008)
- **4m @ 1.22g/t Au** from 52m (21SARC005)

Figure 2: Plan showing the Fairway mineralised trend - 5.5km of gold mineralisation and anomalism from Turnberry to St Anne's.

Figure 3: Plan showing recently completed drilling at the St Anne's prospect.

St Anne's is located 3.5km south of the Turnberry deposit (610,000 ounce gold Mineral Resource) and does not have a Mineral Resource, however these results are extremely positive and support further exploration drilling schedule to commence in the June quarter.

Circle Valley Project – Gold Exploration

At Circle Valley the Company undertook a targeted RC and aircore drilling program at Anomaly A, an extensive regional aircore program and flew a high-resolution magnetic survey over the entire Circle Valley tenure during the quarter to assist in exploration targeting for gold.

The RC drilling included two targeted RC holes testing below a 1.2km by 400m zone of gold in regolith at a prospect named Anomaly A (see [ASX announcement dated 7th February](#)). Both holes intersected foliated felsic gneissic rocks of quartz muscovite to quartz biotite composition and some quartz carbonate veining. Mineralisation does not appear to be associated with veining, it is instead hosted by muscovite altered gneissic rock and is interpreted to be associated with shearing.

The assay results from this drilling are as follows:

Hole 1 – 22CVRC001

- **36m @ 2.69g/t Au** including **20m @ 4.66g/t Au** from 12m
- 8m @ 0.54g/t Au from 96m

Hole 2 – 22CVRC002

- Minor intervals of low-level gold mineralisation (between 10ppb Au and 160ppb Au) from surface to a depth of 194m.

Figure 4: Anomaly A aircore and RC drill results (gold) showing surface gold anomalism and underlying geology.

A total of 13,000m of aircore drilling was completed at Circle Valley during the quarter (see [ASX announcement dated 21st March](#)). This included a focussed drilling program at Anomaly A, which was successful in defining the strike of mineralisation. Based on this improved understanding of the strike of mineralisation at Anomaly A the Company has commenced a further program of deeper RC drill holes to test the interpreted shear zone below these aircore results.

Regional aircore drilling also proved extremely successful with two significant new gold anomalies defined in the northern part of the tenure (Anomaly B and C). These new zones of regolith gold were intersected coincident with a magnetic feature that extends 5.5km east to the Fenceline prospect. The drilling was designed to cross the interpreted strike of the two shear zones observed in the aeromagnetic data, with gold anomalism intersected over a length of 700m and 350m respectively. These two new zones of gold anomalism provide a significant exploration target for the Company with follow up lines of aircore drilling planned to further test this shear system to the east, toward the Fenceline prospect.

Figure 5: Circle Valley gold exploration targets (Anomaly B and C are new targets defined by 2022 aircore drilling).

Regionally, the high-resolution magnetic survey, in addition to the aircore drilling, will assist in exploration targeting for gold. The survey was flown at a 50m line spacing and will provide improved resolution over magnetic features associated with the gold mineralisation, including in the northern part of the tenure where

the two new zones of gold anomalism have been identified (Anomaly B and C), and along which the Fenceline prospect is located.

Figure 6: Airborne magnetic survey being flown at Circle Valley during March 2022.

Circle Valley Project – Rare Earth Exploration

In addition to the gold anomalism identified in aircore drilling at Circle Valley during the quarter, the drilling intersected a thick saprolitic clay horizon blanketing the tenement. This clay horizon varies in thickness ranging from 2m to over 50m and laboratory analysis has shown it to be enriched in REE mineralisation (see [ASX announcement dated 24th March](#)) with results including:

- **1m @ 1,521ppm TREO** within **4m @ 993ppm TREO** from 20m (CVAC035)
- **4m @ 1,269ppm TREO** within **12m @ 715ppm TREO** from 8m (22CVAC030)
- **16m @ 1,098ppm TREO** within **36m @ 672ppm TREO** from 12m (22CVAC031)
- **4m @ 1,177ppm TREO** within **5m @ 1,040ppm TREO** from 36m (CVAC023)
- **4m @ 1,040ppm TREO** within **10m @ 665ppm TREO** from 36m (CVAC036)
- **12m @ 1,003ppm TREO** within **36m @ 672ppm TREO** from 28m (CVAC017)
- **4m @ 937ppm TREO** within **12m @ 638ppm TREO** from 12m (22CVAC029)
- **4m @ 877ppm TREO** within **23m @ 514ppm TREO** from 48m (CVAC019)
- **8m @ 821ppm TREO** within **15m @ 606ppm TREO** from 28m (22CVAC046)
- **16m @ 803ppm TREO** within **23m @ 582ppm TREO** from 12m (22CVAC024)
- **4m @ 597ppm TREO** within **16m @ 494ppm TREO** from 12m (22CVAC049)
- **4m @ 589ppm TREO** within **36m @ 420ppm TREO** from 12m (22CVAC052)
- **4m @ 577ppm TREO** within **28m @ 374ppm TREO** from 24m (22CVAC027)

The REE assay results received to date represent approximately 1,200m of the total 15,100m of aircore drilling completed at Circle Valley over the previous two exploration field seasons. The Company is systematically assaying the remaining 13,900m of drill samples for REE as they were previously only assayed for gold. These REE laboratory results are expected periodically over the coming months.

Figure 7: Plan showing area within the Circle Valley Project tenure where the saprolite clay horizon prospective for REE mineralisation has been intersected by aircore drilling.

Figure 8: Cross section A-A' showing the thick zones of REE mineralisation (>300ppm TREO) intersected by aircore drilling within the saprolite clay horizon (note the figure has a vertical exaggeration of 3x due to the significant 1.4km lateral extent relative to the <100m depth of the drill holes).

Figure 9: Cross section B-B' showing the thick zones of REE mineralisation (>300ppm TREO) intersected by aircore drilling within the saprolite clay horizon (note the figure has a vertical exaggeration of 3x due to the 600m lateral extent relative to the <55m depth of the drill holes).

Cascade Project – Rare Earth Exploration

During the quarter the Company secured 2,068km² of additional tenure, the Cascade Rare Earth Project, under Exploration Licenses and Exploration License Applications (see [ASX announcement dated 21st February](#)).

The Project is located in the Albany-Fraser Mobile Belt, 35km from the regional centre of Esperance and benefits significantly from access to infrastructure, including air and sea ports in Esperance, grid power and an existing road network across the tenure, including the South Coast Highway, which passes through the entirety of the central corridor of the Project from east to west.

Historical assay results relating to 4,426m of reconnaissance drilling completed between 2012 and 2015 across the 100km long southern corridor of the Cascade Project have been retrieved, compiled and reviewed by the Company (see [ASX announcement dated 28th February](#)). This data shows significant areas of elevated REE mineralisation ($\text{La}_2\text{O}_3 + \text{CeO}_2 + \text{Y}_2\text{O}_3$) in the end of hole aircore drill samples, including:

- **2563ppm** at 37m to 38m downhole MGA118
- **1275ppm** at 31m to 32m downhole MGA076
- **1260ppm** at 23m to 24m downhole MGA090
- **868ppm** at 15m to 16m downhole MGA146
- **861ppm** at 32m to 33m downhole MGA076
- **805ppm** at 56m to 57m downhole MGA132
- **763ppm** at 13m to 14m downhole MGA208
- **729ppm** at 13m to 14m downhole MGA089
- **649ppm** at 71m to 72m downhole MGA277
- **574ppm** at 19m to 20m downhole MGA178
- **546ppm** at 15m to 16m downhole MGA282
- **543ppm** at 32m to 33m downhole MGA197

Only three (La + Ce + Y) of the total 15 REE were assayed during the historical exploration work. However, analysis of assay results from Circle Valley and other REE explorers in the Albany-Fraser region show Lanthanum (La) to be a good indicator of total REE content within the regolith (elevated La = elevated total REE). The historical samples from Cascade have elevated Lanthanum grades.

Figure 10: Cascade Project Location.

Figure 11: Cascade REE Project auger sampling and aircore drilling collar points (showing maximum TREO grades).

CORPORATE

Financial

The Company ended the quarter with \$5.1M in cash and no debt.

Refer to the Appendix 5B for an overview of the Company's financial activities during the Quarter.

Capital Structure

The capital structure of the Company at 31st March 2022:

Description	Number
Fully Paid Ordinary Shares	920,385,265
Unlisted options exercisable at \$0.040 each, expiring 15 Feb 2025	500,000
Unlisted options exercisable at \$0.040 each, expiring 31 Jan 2025	30,000,000
Unlisted options exercisable at \$0.050 each, expiring 25 May 2025	300,000
Unlisted options exercisable at \$0.075 each, expiring 25 May 2025	300,000
Unlisted options exercisable at \$0.100 each, expiring 25 May 2025	600,000
Performance Rights Class B – Andy Well transaction	34,600,000
Performance Rights Class C – Andy Well transaction	21,650,000

TENEMENT SCHEDULE

Tenements held or under application at 31st March 2022.

Project	State	Tenement	Status	Interest at start of quarter	Interest at end of quarter
Murchison Gold Project	WA	E 51/1596	Granted	100%	100%
		E 51/1217	Granted	100%	100%

ABOUT MEEKA GOLD LIMITED

Meeka Gold (ASX:MEK) is a junior gold and rare earths explorer with a portfolio of exploration projects across Western Australia.

Meeka's flagship Murchison Gold Project has a combined 343km² landholding in the prolific Murchison Gold Fields of Western Australia and hosts a large high grade 1.1Moz Mineral Resource. The Company is actively exploring on this tenure while also progressing toward production with the release of the Murchison Gold Project Scoping Study in December 2021 outlining a robust Project that produces over 420koz of gold and delivers significant free cashflow.

Complimentary to the Murchison Gold Project, the Company owns the Circle Valley Project in southern WA. Circle Valley sits in the Albany-Fraser Mobile Belt, which hosts the Tropicana gold mine (3Moz past production). Gold mineralisation has been identified in four separate locations at Circle Valley and presents an exciting greenfield exploration opportunity, which the Company is aggressively pursuing.

In addition to gold exploration in the Albany-Fraser, the Company controls the Cascade REE Project, 2,068km² of exploration tenure in a region that is rapidly emerging as a highly prospective ionic clay type rare earths province. The Company intends to leverage its existing exploration resources in the province to conduct fieldwork at Cascade.

MURCHISON GOLD PROJECT

Global Mineral Resource Summary

Project	Measured			Indicated			Inferred			Total		
	Tonnes ('000t)	Grade (g/t)	Ounces ('000oz)	Tonnes ('000t)	Grade (g/t)	Ounces ('000oz)	Tonnes ('000t)	Grade (g/t)	Ounces ('000oz)	Tonnes ('000t)	Grade (g/t)	Ounces ('000oz)
Andy Well	150	11.4	55	1,050	9.3	315	650	6.5	135	1,800	8.6	505
Turnberry				6,800	1.6	355	4,500	1.8	255	11,300	1.7	610
TOTAL	150	11.4	55	7,850	2.7	670	5,150	2.4	390	13,100	2.6	1,115

Notes:

1. Mineral Resources previously reported to the ASX on 18th May 2021 in announcement titled "Murchison Gold Mineral Resource Grows 44% to +1.1 Million Ounces". The Company is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.
2. Mineral Resources are produced in accordance with the 2012 Edition of the Australian Code for Reporting of Mineral Resources and Ore Reserves (JORC 2012).
3. Andy Well Mineral Resource is reported using 0.1g/t cut-off grade.
4. Turnberry Open Pit Mineral Resource is reported within a A\$2,400/oz pit shell and above 0.5g/t cut-off grade.
5. Turnberry Underground Mineral Resource is reported outside a A\$2,400/oz pit shell and above 1.5g/t cut-off grade.

COMPETENT PERSON'S STATEMENT

The information that relates to Exploration Results as those terms are defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserve", is based on information reviewed by Mr Duncan Franey, a Competent Person who is a member of The Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists. Mr Franey is a full-time employee of the Company. Mr Franey has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Franey consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information that relates to Mineral Resources was first reported by the Company in its announcement to the ASX on 18th May 2021. The Company is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

The information that relates to Scoping Study results is based on information compiled by Mr Tim Davidson, a Competent Person who is a Member of the Australian Institute of Mining and Metallurgy. Mr Davidson is a full-time employee of the company. Mr Davidson is eligible to participate in short and long-term incentive plans of and holds shares and performance rights in the Company as previously disclosed. Mr Davidson has sufficient experience in the study, development and operation of gold projects and consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

FORWARD LOOKING STATEMENTS

Certain statements in this report relate to the future, including forward looking statements relating to the Company's financial position, strategy and expected operating results. These forward-looking statements involve known and unknown risks, uncertainties, assumptions and other important factors that could cause the actual results, performance or achievements of the Company to be materially different from future results, performance or achievements expressed or implied by such statements. Actual events or results may differ materially from the events or results expressed or implied in any forward-looking statement and deviations are both normal and to be expected. Other than required by law, neither the Company, their officers nor any other person gives any representation, assurance or guarantee that the occurrence of the events expressed or implied in any forward-looking statements will actually occur. You are cautioned not to place undue reliance on those statements.
