

27 October 2022

September 2022 Quarterly Activities Report

- Shallow aircore drilling at **Murchison Gold Project (MEK 100%)** delivered a **significant gold discovery**, St Anne's, outside of the existing 1.1Moz gold Mineral Resource, results included:
 - **32m @ 16.07g/t Au** from 48m including **16m @ 28.59g/t Au** (22SAAC058)
 - **20m @ 20.74g/t Au** from 48m including **16m @ 24.86g/t Au** (22SAAC061)
 - **24m @ 4.73g/t Au** from 52m including **8m @ 11.78g/t Au** (22SAAC100)
 - **36m @ 3.61g/t Au** from 44m including **8m @ 11.07g/t Au** (22SAAC083)
 - **32m @ 2.20g/t Au** from 48m including **20m @ 3.31g/t Au** (22SAAC009)
 - **32m @ 2.03g/t Au** from 44m including **16m @ 3.59g/t Au** (22SAAC018)
- Shallow aircore drilling also intersected broad zones of high-grade gold outside the Mineral Resource on the Western Flank of Turnberry (610,000oz @ 1.7g/t Au), part of the **Murchison Gold Project**, results included:
 - **32m @ 3.09g/t Au** from 32m including **20m @ 4.53g/t Au** (22TBAC011)
 - **12m @ 3.80g/t Au** from 52m including **4m @ 10.70g/t Au** (22TBAC015)
- Assays for diamond drill holes at the **Murchison Gold Project** targeting a zone 250m-350m below surface at Turnberry central, and under the base of the 2021 Scoping Study open pit shell, returned both high-grades and broad mineralised zones:
 - **18m @ 4.41g/t Au** from 252m including **10m @ 7.26g/t Au** and **23m @ 2.52g/t Au** from 281m including **10m @ 4.31g/t Au** (22TBRCD009)
 - **51m @ 1.64g/t Au** from 264m including **21m @ 3.44g/t Au** (21TBRCD015)
 - **47m @ 1.30g/t Au** from 256m including **17m @ 2.44g/t Au** (21TBRCD010)
 - **2m @ 37.08g/t Au** from 366m including **1m @ 62.80g/t Au** (21TBRCD011)
 - **1m @ 28.23g/t Au** from 330m incl. **0.09m @ 190.85g/t Au** (22TBRCD026)
 - **1m @ 15.60g/t Au** from 305m (22TBRCD027)
- The **Pre-feasibility Study for the Murchison Gold Project** was deferred and will be released in the June 2023 quarter to allow the St Anne's Mineral Resource to be included in the Study.
- **Diamond drilling targeting gold at Circle Valley (MEK 100%)** commenced in September 2022 and will provide valuable information for a larger drill program in January 2023, following up on previously released results including:
 - **23m @ 5.09g/t Au** from 13m including **10m @ 9.35g/t Au** (22CVRC001)
 - **24m @ 1.21g/t Au** from 24m (22CVRC010)
 - **16m @ 3.06g/t Au** from 32m including **4m @ 10.80g/t Au** (22CVRC009)
 - **10m @ 4.72g/t Au** from 120m including **4m @ 10.20g/t Au** (22CVRC008)
 - **32m @ 1.39g/t Au** from 4m including **8m @ 4.96g/t Au** (22CVRC025)
- **Circle Valley rare earths** assays were returned, grading up to **6,894ppm TREO**:
 - **12m @ 2,690ppm TREO (26% NdPr)** from 20m incl. **4m @ 6,894ppm TREO** (22CVAC250)
 - **8m @ 2,766ppm TREO (27% NdPr)** from 28m incl. **4m @ 5,031ppm TREO** (22CVAC212)
- The Gecko North Project (E15/1587) sale completed for a total consideration of \$230,000 in cash, plus 1.5% net smelter return royalty.
- **The Company's strong cash position of \$8.3m at quarter end allows for continued aggressive drilling activities across the project portfolio.**

For personal use only

Commenting on the quarter, Meeka's Managing Director Tim Davidson said: "This was another safe, productive and successful quarter for Meeka. Focus during the quarter was on our Murchison Gold Project with drilling persistently returning shallow, high-grade assays at St Anne's, reinforcing the exceptional growth opportunity at that project. This drilling remains on going, with the addition of a diamond drill rig in early October 2022, which allows testing of mineralisation at depth.

The team has also commenced work on the inclusion of St Anne's in our next Mineral Resource update, targeted for the December 2022 quarter. Given the shallow, high-grade nature of mineralisation at St Anne's and the potential for this to have a meaningful impact on the outcome of the Pre-Feasibility Study, we decided to defer the release of the study. The expanded study incorporating St Anne's will now be released in mid-2023 allowing us to optimise the impact of St Anne's on our other mining centres and mill sizing.

In addition, the team expanded their understanding of the geology at Circle Valley with diamond drilling commencing at Anomaly A in September 2022. This short program will provide valuable information on the structural setting and gold mineralisation controls prior to a larger drill program commencing in January 2023.

Also at Circle Valley, we received the highest-grade rare earth assays to date, >6000ppm TREO. These results also show a shallowing cover profile to the northwest, corresponding with a +1,000ppm high-grade component of the rare earth mineralisation, rich in NdPr magnet rare earth elements. This shallow high-grade mineralisation appears to trend northwest into an undrilled part of Circle Valley, which will be a focus for Mineral Resource infill drilling commencing in early 2023. Good progress is also being made on the metallurgical front where we are working to optimise the process flow sheet.

Finally, we raised \$8.3 million during the quarter which allowed us to immediately accelerate our drilling program at St Anne's and to continue drilling throughout the year in both the Murchison and in the Albany-Fraser region. For this we thank existing shareholders, including the directors who participated in the placement, for their continued strong support of the Company while also welcoming new shareholders, including high quality domestic and international institutions."

Meeka Metals Limited ("**Meeka**" or "**the Company**") is pleased to provide a summary of activities completed during the September 2022 quarter.

The Company was active in advancing its gold and rare earths projects with work ongoing throughout the quarter in the Murchison, and at Circle Valley late in the quarter where an additional field team mobilised to that project.

Drilling continued throughout the quarter at the Murchison Gold Project, focussed on Mineral Resource growth. Shallow aircore drilling intersected high-grade gold over significant widths at St Anne's early in early August 2022 and the planned drill program rapidly expanded to define strike and depth continuity of the mineralisation.

Diamond drilling for gold at Circle Valley commenced in September 2022 with a total of four holes planned. These holes will provide valuable information in advance of a larger drill program commencing in January 2023.

Finally, assays from rare earth drilling conducted at Circle Valley were received, showing the cover profile shallows to the northwest, coincident with the highest-grade mineralisation recorded to date, 6,894ppm TREO. The mineralisation also persistently demonstrates a high proportion of the grade, up to 31% in these results, as valuable NdPr magnet rare earths.

Commercially, the Company monetised the non-core Gecko North Project for a total of \$230,000 in cash, plus 1.5% net smelter return royalty over all minerals extracted from the project. The Company has received \$130,000. A further payment of \$100,000 is due in February 2023.

The Company finished the quarter strongly with a cash position of \$8.3m.

Murchison Gold Project

Drilling continued in the Murchison throughout the quarter, focussed on Mineral Resource growth at Turnberry and St Anne's, which is not yet included in a Mineral Resource.

Figure 1: Meeka's 100% owned Murchison Gold Project showing the location of Turnberry and St Anne's where drilling is ongoing with plans to continue through to December 2022.

Figure 2: The Murchison Gold Project – strategically located proximal to large gold processing infrastructure within the Archean Greenstone Belt on the northern end of the Mount Magnet Shear Zone.

The program has been highly successful to date, intersecting broad zones of shallow, high-grade gold at St Anne's:

- **32m @ 16.07g/t Au** from 48m including **16m @ 28.59g/t Au** (22SAAC058)
- **20m @ 20.74g/t Au** from 48m including **16m @ 24.86g/t Au** (22SAAC061)
- **32m @ 2.20g/t Au** from 48m including **20m @ 3.31g/t Au** (22SAAC009)
- **32m @ 2.03g/t Au** from 44m including **16m @ 3.59g/t Au** (22SAAC018)
- **28m @ 1.47g/t Au** from 28m including **8m @ 3.46g/t Au** (22SAAC005)

The host geology at St Anne's is a sequence of felsic volcanoclastics and mafic rocks. The mineralisation is predominantly hosted by the mafic unit within a broad, sub-vertical north-south trending shear zone on the contact with the felsic volcanoclastics. Strong geological continuity is observed between holes which intersected thick zones of quartz veining (see Figure 4 and Figure 5) and host the high-grade and coarse nuggety gold (see Figure 3). This quartz veining and coincident geochemical signature extends to the north of St Anne's, where drilling has been completed and assays are pending.

Figure 3: Coarse gold panned from interval 52m-56m in hole 22SAAC061, which returned 4m @ 63.20g/t Au.

Figure 4: Chip tray from hole 22SAAC058 showing the 32m quartz intercept which hosts the high-grade (32m @ 16.07g/t Au) gold.

Figure 5: Chip tray from hole 22SAAC061 showing the 20m quartz intercept which hosts the high-grade (20m @ 20.74g/t Au) gold.

Five deeper RC holes were also drilled at St Anne's during the quarter with all holes intersecting the quartz lode at target depth. Hole 22SARC005 returned positive indications with visible gold observed in the RC chips. A diamond drill arrived in early October 2022 follow up this primary mineralisation below and along strike from hole 22SARC005.

Figure 6: St Anne's long section along shear zone showing oblique cross cutting shears, assay results, planned extensional drill hole pierce points and pierce points for which assays are pending, including for hole 22SARC005 where visible gold was observed.

Figure 7: RC chips from 22SARC005 showing visible gold (interval 172-173m down hole).

Figure 8: RC chips and visible gold panned from 22SARC005 (interval 172-173m down hole).

Infill drilling around the western flank of Turnberry (610,000oz @ 1.7g/t Au) where mineralisation was intersected outside the Mineral Resource in 2021 was also completed during the quarter. Assays confirmed the continuity of shallow, high-grade gold projecting to the north, into a zone previously untested by drilling, results included:

- **32m @ 3.09g/t Au** from 32m including **20m @ 4.53g/t Au** (22TBAC011)
- **12m @ 3.80g/t Au** from 52m including **4m @ 10.70g/t Au** (22TBAC015)
- **48m @ 0.91g/t Au** from 12m including **24m @ 1.37g/t Au** (22TBAC010)
- **8m @ 1.77g/t Au** from 48m including **4m @ 3.18g/t Au** (22TBAC020)

Figure 9: Plan showing Western Flank hole locations and results, current Mineral Resource and Scoping Study pit shell.

Figure 10: Plan showing interpreted shallow high-grade gold mineralisation intersected on the Western Flank.

Circle Valley – Gold

Diamond drilling commenced in September 2022 at Circle Valley, following up on broad zones of high-grade gold intersected by RC drilling below a large 1.2km by 400m surface anomaly. A total of four diamond holes are planned along strike from RC results including:

- **23m @ 5.09g/t Au** from 13m incl. **10m @ 9.35g/t Au** (22CVRC001)
- **24m @ 1.21g/t Au** from 24m (22CVRC010)
- **16m @ 3.06g/t Au** from 32m incl. **4m @ 10.80g/t Au** (22CVRC009)
- **10m @ 4.72g/t Au** from 120m incl. **4m @ 10.20g/t Au** (22CVRC008)
- **32m @ 1.39g/t Au** from 4m incl. **8m @ 4.96g/t Au** (22CVRC025)
- **40m @ 0.70g/t Au** from 48m incl. **8m @ 1.17g/t Au** (22CVRC027)

Figure 11: Meeka's 100% owned Circle Valley Project showing location of diamond drilling at Anomaly A and select results from previous RC drilling completed between January and April 2022.

The diamond drilling has intersected a high-grade metamorphic assemblage intruded by late narrow pegmatitic intrusions. Silica flooding and potassic alteration with biotitic zones is observed in the core, as well as potassic feldspar associated with zones of migmatisation. These holes will provide valuable information in advance of a larger drill program commencing in January 2023.

Figure 12: Diamond core from hole 22ALDD002 (101.2m to 105.8m) showing strongly sheared quartz migmatite with late narrow pegmatitic intrusions.

Figure 13: diamond drilling underway at Anomaly A, Circle Valley.

Circle Valley – Rare Earths

Assays from reconnaissance aircore drilling (100m-200m spacing) were received for 65 holes (3,240m) with results continuing to demonstrate the pervasive nature of the high-grade rare earths. The rare earths accumulate within the saprolite clay horizon creating thick, near surface mineralised zones below shallow transported cover. The assays received during the quarter show the cover profile shallows to the northwest of Circle Valley, coincident with the highest-grade mineralisation recorded to date, 6,894ppm TREO. The mineralisation also persistently demonstrates a high proportion of the grade, up to 31% in these results, as valuable NdPr magnet rare earths.

Notable intersections (above 500ppm TREO) from this tranche of assays include:

- **8m @ 2,766ppm TREO (27% NdPr) and 18g/t Scandium** from 28m (22CVAC212)
- **12m @ 2,690ppm TREO (26% NdPr) and 26g/t Scandium** from 20m (22CVAC250)
- **4m @ 2,787ppm TREO (31% NdPr) and 41g/t Scandium** from 56m (22CVAC341)
- **4m @ 1,940ppm TREO (20% NdPr) and 3g/t Scandium** from 12m (22CVAC234)
- **8m @ 1,433ppm TREO (26% NdPr) and 21g/t Scandium** from 16m (22CVAC244)
- **8m @ 1,102ppm TREO (22% NdPr) and 15g/t Scandium** from 12m (22CVAC252)
- **6m @ 1,069ppm TREO (15% NdPr) and 13g/t Scandium** from 16m (22CVAC306)
- **4m @ 938ppm TREO (30% NdPr) and 8g/t Scandium** from 12m (22CVAC344)
- **4m @ 941ppm TREO (29% NdPr) and 11g/t Scandium** from 24m (22CVAC343)

Following the initial rare earth metallurgical test program completed by Australian Nuclear Science and Technology Organisation (“ANSTO”) in July 2022, which provided positive leach test results, further test work commenced to refine and improve the metallurgical processes. This ongoing program will evaluate upstream mineral processing techniques to upgrade mineralisation and remove non-target elements prior to extraction.

Figure 14: Meeka's 100% owned Circle Valley Project (222km²) showing collar locations, holes for which assays have been received and holes with assays pending.

Figure 15: North-western area showing consistent thick, high-grade rare earths with a high proportion of NdPr elements.

Figure 16: Section A-A' on Figure 15 – cross section through mineralisation.

Figure 17: Section B-B' on Figure 15 – cross section through mineralisation.

Figure 18: Section C-C' on Figure 15 – cross section through mineralisation.

Figure 19: Section D-D' on Figure 15 – cross section through mineralisation.

Cascade – Rare Earths

With the St Anne's discovery at the Murchison Gold Project resulting in an expanded and ongoing drilling program, work planned to commence at the Cascade rare earths project during the quarter, drill testing large-scale targets generated from surface sampling, was deferred.

CORPORATE

Commercial

The Company completed the sale of the Gecko North Project (E15/1587) to an unrelated party, LithGold Minerals Ltd. The value of the transaction is \$230,000 in cash, plus 1.5% net smelter return royalty over all minerals extracted from the project. The Company has received \$130,000. A further payment of \$100,000 is due in February 2023.

The Company has a clear strategy of focussed and disciplined capital allocation. This transaction aligns with that strategy, freeing up capital to advance drilling and development activities within its portfolio of high quality 100% owned projects across Western Australia. Leverage to upside at Gecko North is maintained though a royalty over the property.

Financial

An Appendix 5B – Quarterly Cash Flow Report for the quarter ended 30 September 2022, accompanies this Activities Report.

During the quarter the Company raised ~\$8.3m (before costs) through the issue of 138,057,000 fully paid ordinary shares (Tranche 1).

Directors subscribed for a further ~9.2 million shares (\$550,000), subject to shareholder approval, which will be sought at the annual general meeting held on 3 November 2022 (Tranche 2).

During the quarter the Company spent approximately:

- \$1.8m on exploration and evaluation activities.
- \$316k on administration and corporate costs.
- \$116k in payments were made to related parties and their associates for director fees, company secretarial fees, bookkeeping fees and legal fees.

The Company ended the quarter with \$8.3m in cash and no debt.

Capital Structure

The capital structure of the Company at 30 September 2022:

Description	Number
Fully Paid Ordinary Shares	1,058,442,264
Unlisted options exercisable at \$0.040 each, expiring 15 Feb 2025	500,000
Unlisted options exercisable at \$0.040 each, expiring 31 Jan 2025	30,000,000
Unlisted options exercisable at \$0.050 each, expiring 25 May 2025	300,000
Unlisted options exercisable at \$0.075 each, expiring 25 May 2025	300,000
Unlisted options exercisable at \$0.100 each, expiring 25 May 2025	600,000
Unlisted options exercisable at \$0.060 each, expiring 4 April 2025	900,000
Unlisted options exercisable at \$0.080 each, expiring 4 April 2025	900,000
Unlisted options exercisable at \$0.100 each, expiring 4 April 2025	1,800,000
Unlisted options exercisable at \$0.060 each, expiring 1 May 2025	875,000
Unlisted options exercisable at \$0.080 each, expiring 1 June 2025	875,000
Unlisted options exercisable at \$0.100 each, expiring 1 July 2025	1,750,000
Performance Rights Class B – \$0.075 VWAP (15-day) price hurdle, expiring 8 August 2023*	34,600,000
Performance Rights Class C – \$0.100 VWAP (15-day) price hurdle, expiring 8 August 2023	21,650,000
Performance Rights Class D – \$0.125 VWAP (20-day) price hurdle, expiring 7 July 2026	38,250,000

**During the quarter, performance hurdles for Performance Rights Class B relating to the Andy Well transaction were met. The Company anticipates these shares will be issued in July 2023.*

TENEMENT SCHEDULE

Tenements held or under application at 30 September 2022.

Project	State	Tenement	Status	Interest at start of quarter	Interest at end of quarter
Murchison Gold Project	WA	E 51/1596	Granted	100%	100%

FORTHCOMING ANNOUNCEMENTS

November – December 2022: Gold assays from drilling at St Anne's, Murchison Gold Project.

3 November 2022: Annual General Meeting.

11 November 2022: Company Presentation – Noosa Mining Investor Conference.

23 November 2022: Company Presentation – RIU Resurgence Conference.

December 2022: St Anne's initial metallurgical test work results.

December 2022: Initial Mineral Resource – St Anne's, Murchison Gold Project.

December 2022: Updated Mineral Resource – Turnberry, Murchison Gold Project.

December – March 2023: Gold assays from diamond drilling at St Anne's, Murchison Gold Project.

December – March 2023: Gold assays from Circle Valley (Anomaly A) extensional drilling.

January 2023: December 2022 Quarterly Activities Report.

January – March 2023: Rare earth assays from Circle Valley infill drilling.

March 2023: Interim Financial Report – half year to 31 December 2022.

April 2023: March 2023 Quarterly Activities Report.

June 2023: Pre-feasibility Study for the Murchison Gold Project.

July 2023: June 2023 Quarterly Activities Report.

This announcement has been authorised for release by the Company's Board of Directors.

ABOUT MEEKA

Meeka Metals Limited is gold and rare earths company with a portfolio of high quality 100% owned projects across Western Australia.

Gold

Meeka's flagship Murchison Gold Project has a combined 343km² landholding in the prolific Murchison Gold Fields and hosts a large high-grade 1.1Moz JORC Resource. The Company is actively growing these Resources while also progressing toward production. The release of the Murchison Gold Project Scoping Study in December 2021 outlined a robust Project that produces over 420koz of gold.

In addition, Meeka owns the Circle Valley Project (222km²) in the Albany-Fraser Mobile Belt (also host to the Tropicana gold mine – 3Moz past production). Gold mineralisation has been identified in four separate locations at Circle Valley and presents an exciting growth opportunity, which is being aggressively pursued.

Rare Earths

Meeka controls the Cascade Rare Earths Project (2,269km²) in a region that is rapidly emerging as a highly prospective clay rare earths province. Importantly, the results to date contain high levels of permanent magnet metals being Neodymium-Praseodymium oxides. These metals are geopolitically critical, and Meeka intend to accelerate our understanding of Cascade through metallurgical work and ongoing drilling.

Circle Valley also hosts clay rare earths within thick, near surface mineralised zones below shallow transported cover. The mineralisation persistently demonstrates a high proportion of the grade as neodymium-praseodymium oxides. Metallurgical work, in addition to infill and extensional drilling remain ongoing. An initial Mineral Resource is targeted for 2023.

Global Mineral Resource Summary

Project	Measured			Indicated			Inferred			Total		
	Tonnes (^{'000} t)	Grade (g/t)	Ounces (^{'000} oz)	Tonnes (^{'000} t)	Grade (g/t)	Ounces (^{'000} oz)	Tonnes (^{'000} t)	Grade (g/t)	Ounces (^{'000} oz)	Tonnes (^{'000} t)	Grade (g/t)	Ounces (^{'000} oz)
Andy Well	150	11.4	55	1,050	9.3	315	650	6.5	135	1,800	8.6	505
Turnberry				6,800	1.6	355	4,500	1.8	255	11,300	1.7	610
TOTAL	150	11.4	55	7,850	2.7	670	5,150	2.4	390	13,100	2.6	1,115

Notes:

1. Mineral Resources previously reported to the ASX on 18 May 2021 in announcement titled "Murchison Gold Mineral Resource Grows 44% to +1.1 Million Ounces". The Company is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.
2. Mineral Resources are produced in accordance with the 2012 Edition of the Australian Code for Reporting of Mineral Resources and Ore Reserves (JORC 2012).
3. Andy Well Mineral Resource is reported using 0.1g/t cut-off grade.
4. Turnberry Open Pit Mineral Resource is reported within a A\$2,400/oz pit shell and above 0.5g/t cut-off grade.
5. Turnberry Underground Mineral Resource is reported outside a A\$2,400/oz pit shell and above 1.5g/t cut-off grade.

COMPETENT PERSON'S STATEMENT

The information that relates to Exploration Results as those terms are defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserve", is based on information reviewed by Mr Duncan Franey, a Competent Person who is a member of The Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists. Mr Franey is a full-time employee of the Company. Mr Franey has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Franey consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information that relates to Mineral Resources was first reported by the Company in its announcement to the ASX on 18 May 2021. The Company is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

The information that relates to Scoping Study results is based on information compiled by Mr Tim Davidson, a Competent Person who is a Member of the Australian Institute of Mining and Metallurgy. Mr Davidson is a full-time employee of the company. Mr Davidson is eligible to participate in short and long-term incentive plans of and holds shares and performance rights in the Company as previously disclosed. Mr Davidson has sufficient experience in the study, development and operation of gold projects and consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

FORWARD LOOKING STATEMENTS

Certain statements in this report relate to the future, including forward looking statements relating to the Company's financial position, strategy and expected operating results. These forward-looking statements involve known and unknown risks, uncertainties, assumptions and other important factors that could cause the actual results, performance or achievements of the Company to be materially different from future results, performance or achievements expressed or implied by such statements. Actual events or results may differ materially from the events or results expressed or implied in any forward-looking statement and deviations are both normal and to be expected. Other than required by law, neither the Company, their officers nor any other person gives any representation, assurance or guarantee that the occurrence of the events expressed or implied in any forward-looking statements will actually occur. You are cautioned not to place undue reliance on those statements.
