

31 March 2023

High Impact Drilling Underway in the Murchison

- **Drilling has recommenced at the Murchison Gold Project (MEK 100%) targeting the 25km long Fairway shear zone, an economically important zone of shearing and high strain within the Archean Gnaweeda greenstone belt, which already hosts 0.7Moz at Turnberry.**
- The Fairway shear zone remains largely untested outside of Turnberry and St Anne's. Approximately 90% of the shear zone has either no drilling or has ineffective, broad spaced RAB or aircore reconnaissance drilling from the 1990's and 2000's.
- **The Company's independent technical consultants have advised of a short delay delivering the initial St Anne's Mineral Resource, which will now be released in April 2023.**
- The Pre-feasibility Study remains on track for delivery in the June 2023 quarter and will include the St Anne's Mineral Resource.

Commenting on the recommencement of drilling, Meeka's Managing Director Tim Davidson said: "This program will target areas where ineffective broad spaced historical RAB and aircore drilling intersected strong coincident gold-arsenic anomalies but were not followed up. This approach proved highly successful in 2022 when we targeted gold-arsenic anomalism at St Anne's and discovered extensive, shallow, high-grade gold. We are looking to build on that success and add further high value ounces to our Mineral Resource. First assays from this drilling are expected in May 2023."

Meeka Metals Limited ("Meeka" or "the Company") is pleased to report that drilling has recommenced at the Murchison Gold Project. The drilling will target shallow, high-grade gold mineralisation within the Fairway shear zone, a sheared package of mafic rocks that represents an economically important zone of gold mineralisation within the Archean Gnaweeda greenstone belt. The belt already hosts 0.7Moz at Turnberry and a Mineral Resource for St Anne's is expected in April 2023.

Drilling will focus on a series of ranked targets that display important geochemical (gold-arsenic) and geophysical signatures. The initial 5 targets (Figure 2 – GNA 002, 009, 010, 015, 021) represent approximately 12,000m of drilling with results due from May 2023 onwards.

Figure 1: Plan view of Murchison Gold Project (MEK 100%) showing 2023 drilling target corridor along the Fairway shear zone, an economically important zone of shearing and high strain within the Archean Gnaweeda greenstone belt.

Figure 2: Geology map of the Gnaweeda greenstone belt showing location of the Turnberry Mineral Resource (10.6Mt @ 2.0g/t Au for 685k ounces), St Anne's (Mineral Resource due in April 2023) and initial drilling locations (GNA 002, 009, 010, 015, 021) for the 2023 work program now underway, representing approximately 12,000m of drilling.

FORTHCOMING ANNOUNCEMENTS

April 2023: Initial Mineral Resource – St Anne’s, Murchison Gold Project.

April 2023: Rare earth assays from Circle Valley infill drilling.

April 2023: March 2023 Quarterly Activities Report.

From May 2023 onwards: Gold assays from Fairway shear zone drilling, Murchison Gold Project.

9-11 May 2023: Presentation and attendance – RIU Sydney Resources Round-up Conference.

21-22 June 2023: Presentation and attendance – Gold Coast Investment Showcase.

June 2023: Initial Mineral Resource – Circle Valley (rare earths).

June 2023: Pre-feasibility Study for the Murchison Gold Project.

July 2023: June 2023 Quarterly Activities Report.

29-30 August 2023: Presentation and attendance – Australian Gold Conference, Sydney.

This announcement has been authorised for release by the Company's Board of Directors.

ABOUT MEEKA

Meeka Metals Limited is a gold and rare earths company with a portfolio of high quality 100% owned projects across Western Australia.

Gold

Meeka's flagship Murchison Gold Project has a combined 281km² landholding in the prolific Murchison Gold Fields and hosts a large high-grade 1.2Moz JORC Resource. The Company is actively growing these Resources while also progressing toward production. The release of the Murchison Gold Project Scoping Study in December 2021 outlined a robust Project that produces over 420koz of gold¹.

In addition, Meeka owns the Circle Valley Project (222km²) in the Albany-Fraser Mobile Belt (also host to the Tropicana gold mine – 3Moz past production). Gold mineralisation has been identified in four separate locations at Circle Valley and presents an exciting growth opportunity, which is being aggressively pursued.

Rare Earths

Meeka controls the Cascade Rare Earths Project (2,269km²) in a region that is rapidly emerging as a highly prospective clay rare earths province. Importantly, the results to date contain high levels of permanent magnet metals (neodymium-praseodymium). These metals are geopolitically critical, and the Company intends to accelerate its understanding of Cascade through metallurgical work and ongoing drilling.

Circle Valley also hosts clay rare earths within thick, near surface mineralised zones below shallow transported cover. The mineralisation consistently demonstrates a high proportion of the grade as neodymium-praseodymium oxides. Metallurgical work, in addition to infill and extensional drilling are ongoing. An initial Mineral Resource is targeted for 2023.

¹ First reported in announcement dated 1 December 2021 and titled "Murchison Gold Project Scoping Study". The company confirms that it is not aware of any new information or data that materially affects the information included in the original announcement and that all material assumptions and technical parameters underpinning the target continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Mineral Resource Summary

Project	Measured			Indicated			Inferred			Total		
	Tonnes (¹ 000t)	Grade (g/t)	Ounces (¹ 000oz)	Tonnes (¹ 000t)	Grade (g/t)	Ounces (¹ 000oz)	Tonnes (¹ 000t)	Grade (g/t)	Ounces (¹ 000oz)	Tonnes (¹ 000t)	Grade (g/t)	Ounces (¹ 000oz)
Andy Well	150	11.4	55	1,050	9.3	315	650	6.5	135	1,800	8.6	505
Turnberry				4,600	1.6	230	6,000	2.4	455	10,600	2.0	685
TOTAL	150	11.4	55	5,650	3.0	545	6,650	2.8	590	12,400	3.0	1,190

Notes:

1. Mineral Resources reported to the ASX on 3 January 2023. The company confirms that it is not aware of any new information or data that materially affects the information included in the original announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.
2. Mineral Resources are classified in accordance with JORC code (2012).
3. Andy Well Mineral Resource is reported using 0.1g/t cut-off grade.
4. The Turnberry open pit Mineral Resource is only the portion of the Mineral Resource that is constrained within a A\$2,600/oz optimised pit shell and above a 0.5g/t gold cut-off grade.
5. The Turnberry underground Mineral Resource is only the portion of the Mineral Resource that is located outside the A\$2,600/oz optimised pit shell and above a 1.5g/t gold cut-off grade.
6. Estimates are rounded to reflect the level of confidence in the Mineral Resources at the time of reporting.

COMPETENT PERSON'S STATEMENT

The information that relates to Exploration Results as those terms are defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserve", is based on information reviewed by Mr Duncan Franey, a Competent Person who is a member of The Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists. Mr Franey is a full-time employee of the Company. Mr Franey has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Franey consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information that relates to Mineral Resources was first reported by the Company in its announcement to the ASX on 3 January 2023. The Company is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

FORWARD LOOKING STATEMENTS

Certain statements in this report relate to the future, including forward looking statements relating to the Company's financial position, strategy and expected operating results. These forward-looking statements involve known and unknown risks, uncertainties, assumptions and other important factors that could cause the actual results, performance or achievements of the Company to be materially different from future results, performance or achievements expressed or implied by such statements. Actual events or results may differ materially from the events or results expressed or implied in any forward-looking statement and deviations are both normal and to be expected. Other than required by law, neither the Company, their officers nor any other person gives any representation, assurance or guarantee that the occurrence of the events expressed or implied in any forward-looking statements will actually occur. You are cautioned not to place undue reliance on those statements.
